

# Detox

Time, sun exposure, the elements, pollution and our lifestyles all take their toll on our skin. Also any excess, for instance during Holiday Season.

The same way as it is advisable to debug our body of toxins through diet, we need to help our skin to recover from the excesses with food, smoking, lack of rest, fatigue, lack of sleep, alcoholic drinks, hangover, excessive caffeine, timetable changes...

During the Holiday Season, food becomes richer in fat, sugar and salt, while we tend to eat more than we usually do.

This can cause pimples and blackheads in our skin, a sign that we are not eating as healthy as we should appear.

Cobiosa proposes producers to use some of its ingredients in different treatments to avoid any kind of related problems

## Keratopeel

Keratopeel is an enzymatic peeling composed by Keratinase, a protein from biotechnological origin, that boosts the natural exfoliation process and the cell skin turnover. It acts selectively at epidermis level breaking the links between corneocytes, the corneodesmosomes.

## Pore Reductyl

PORE REDUCTYL is a pore refiner for oily and mixed skins. It is a natural astringent containing agaric acid that overcomes all excessive secretion, smoothing, tightening and moisturizing the skin. Very used at cleansers.

## Cobio- $\alpha$ HA

COBIO- $\alpha$ HA is a synergic complex of Alpha Hydroxy Acids strengthened with moisturizing agents: Oligosaccharides and Urea, main compounds of the NMF. AHAs in COBIO- $\alpha$ HA have been partly neutralized in order to minimize the reactions of intolerance

## Exfoliation

## Cleansing and Pore Reduction

## Bio-Hydractyl

Bio-Hydractyl is a blend composed by Honey extract, a natural moisturizer whose composition is very close to the human NMF, and Marine Glycogen, an energy source for skin cells.

## Hydration

## Lipo-Ceravit C

Soluble Vitamin C in pure Ceramides liposomes. Its high penetration system allows a deep release of the Vitamin C inside the skin. Ceramides are perfect to moisturize the upper layers of the skin, ensuring the cohesion of corneocytes.

## Anti-Free Radicals

## C20<sup>+</sup> Cobiolive

C20<sup>+</sup> is characterized by its high content of HYDROXYTYROSOL (over 20%), Tyrosol and other Polyphenols. This combination produces positive synergistic effects, resulting in high antioxidant properties.

## Inca Omega Oil

Oil extracted from the seed of Sacha Inchi (*Plukenetia volubilis*), native plant that grows at the high altitudes of the rain forest of the Andean region of South America. It has 48% of alpha-linolenic (Omega 3), and 37% of linoleic (Omega 6). It also has a 8% of oleic acid.
